SAMPLE ASSESSMENT TASKS

MARINE AND MARITIME STUDIES
GENERAL YEAR 11
Sample assessment task

Marine and Maritime Studies – General Year 11

Task 3 — Unit 1

Assessment type: Extended response

Conditions
Period allowed for completion of the task: three weeks; a combination of in-class and out-of-class time

Task weighting
2.5% of the school mark for this pair of units

Marine resource management research (25 marks)

Background
Commercial fishing is an important contributor to the Western Australian economy. It provides direct employment for about 5,000 people, plus many more in associated industries. As well, an estimated one third of the W.A. population fish recreationally. For continued commercial and recreational fishing, stocks need to be harvested sustainably. To maintain fish stocks and ensure the health of their ecosystems, management is required.

What you need to do
Select one of the major Western Australian fisheries (see below) to research the following questions around their management. If there is another fishery not listed that you would like to research, you may discuss this with your teacher.

Focus questions

Introduction
1. What are the common and scientific names of the marine organism/fish you have chosen?
2. Give the bioregion where the fishery is located and, on a map of Western Australia, show the area/s where the fishery is located?

Strategies, recommendations and actions
3. What are the strategies, recommendations and suggested actions aimed at managing the fishery? Use the following to guide your discussion of the fishery’s management:
   • habitat conservation and rehabilitation priorities
   • long-term sustainability of the fishery – identify any natural, human and introduced threats to its long-term survival and actions taken to minimise these effects
   • selected dates or regional closure times and identify the purpose for these times
   • recreational and commercial- catch quotas and specifications including minimum and maximum sizes and the return of breeding stock
   • any other issues associated with sustainability of the fishery.
Conclusion

4. Provide a concluding statement, with at least three (3) points, that summarises the current sustainability of the fishery. The statement needs to provide evidence to support your conclusion as to whether the fishery is sustainable or not.

The major Western Australian commercial fisheries include:
- the West Coast Rock lobster
- Abalone
- the Exmouth Gulf Prawn
- the Shark Bay Prawn, and
- the Shark Bay Scallop.

Other fisheries can be found on the Western Australian Department of Fisheries website (http://www.fisheries.wa.gov.au/Pages/Home.aspx).

The annual *The State of the Fisheries and Aquatic Resources Report* available through the Western Australian Department of Fisheries website can be a useful resource.

Sample assessment task

Marine and Maritime Studies – General Year 11

Task 5 — Unit 1

**Assessment type:** Science inquiry/Investigation

**Conditions**

Period allowed for completion of the task: one week for planning and setting up of experiment followed by up to two weeks to monitor progress of reaction

One class lesson to finalise report

**Task weighting**

5% of the school mark for this pair of units

---

**Investigating the corrosion of steel** (39 marks)

In this task, you will research, prepare and conduct an investigation to assess the effect of salt on the corrosion of steel. Tests should be carried out to determine whether a relationship exists between the concentration of salt in water and the rate of corrosion of steel. You will be required to prepare a scientific report to summarise and explain your findings.

**The steps involved**

Phase 1 – Research and planning (individual, followed by group refinement)

Phase 2 – Carrying out of experiment (group work)

Phase 3 – Data processing and analysis (individual, followed by group refinement)

Phase 4 – Evaluation (individual, followed by group refinement)

**What you need to do**

**Research and planning**

(a) Initially working on your own, research background information about corrosion. Use the ‘Research’ questions on the *Investigating the corrosion of steel* worksheet to assist with your research. You need to show this to your teacher before the next step.

(b) Working in your group, discuss your individual research and refine your ideas through group discussion. Each member of the group will need to submit the revised answers to the ‘Research’ questions.

(c) Initially working on your own, complete the ‘Planning’ questions on the *Investigating the corrosion of steel* worksheet. You will be given 20 minutes of class time to do this. You need to show this to your teacher before the next step.

(d) Working in your group, discuss your individual planning and refine your ideas through group discussion. Each member of the group will need to submit the revised answers to the ‘Planning’ questions.
Carrying out of experiment

Once your plan has been checked by the teacher, collect the equipment you need and carry out the experimental work.

Processing the data and Evaluation

(a) Initially working on your own, complete the ‘Data processing and analysis’ and ‘Evaluation’ questions on the *Investigating the corrosion of steel* worksheet. You will be given class time to do this. You need to show this to your teacher before the next step.

(b) Working in your group, discuss your individual data processing and analysis and evaluation and refine your ideas through group discussion. Each member of the group will need to submit the revised answers to the ‘Data processing and analysis’ and ‘Evaluation’ questions.

What you need to submit

At the end of the investigation you need to submit your *Investigating the corrosion of steel* worksheet.

PLEASE DO NOT OPEN THE TEST UNTIL INSTRUCTED TO DO SO
Section One: Multiple-choice questions
Choose the correct answer from the choices offered.

1. The land mass extending from a continent and usually resulting in a relatively shallow region of sea is known as a
   (a) benthic zone.
   (b) continental shelf.
   (c) abyssal zone.
   (d) sediment zone.

2. Which one of the following ocean zones generally shows the greatest variation in salinity?
   (a) inter-tidal
   (b) continental shelf
   (c) pelagic
   (d) deep sea

3. Which one of the following is not a sub-division of the pelagic ocean zone?
   (a) epipelagic
   (b) mesopelagic
   (c) demersalpelagic
   (d) hadopelagic

4. In which one of the following ocean areas do the majority of marine animal species live?
   (a) inter-tidal zone
   (b) photic pelagic zone
   (c) deep sea zone
   (d) benthic

5. Organisms that live on, in, or near the seabed are known as
   (a) benthic.
   (b) abyssal.
   (c) pelagic.
   (d) littoral.

6. Nektons are marine organisms that
   (a) are sessile.
   (b) are able to move independently of water currents.
   (c) burrow in the ocean floor.
   (d) attach to rocks in the ocean.
7. Which one of the following is **not** a typical environmental feature to which organisms living in the inter-tidal zone need to be adapted?

   (a) daily changes in water availability  
   (b) rough waves  
   (c) relatively large temperature variations  
   (d) large daily variations in exposure to ultra-violet (UV) light

8. Which one of the following is **not** an environmental feature to which deep sea organisms need to be adapted?

   (a) low temperatures  
   (b) high pressures  
   (c) low oxygen levels  
   (d) darkness

9. Which one of the following is **not** thought to be a reason some deep sea organisms have evolved bioluminescence?

   (a) headlights to help it see  
   (b) to increase its visibility  
   (c) lures to attract curious prey  
   (d) unique light patterns for attracting mates

10. A food web consists of a system of interconnected

    (a) animal species.  
    (b) plant species.  
    (c) herbivores and carnivores.  
    (d) food chains.
Section Two: Short answer

This section has four (4) questions. Attempt all questions from this section.

Write your answers in the space provided.

Question 1

Read the information in the box to answer the questions that follow.

A mangrove is a land plant able to live in salt water. In Western Australia, mangroves are common along the coastline from the Kimberley, Dampier and Exmouth and as far south as the Leschenault Inlet in Bunbury.

Mangroves live in a low-oxygen and high-salt environment. Wind, waves and large tidal variations make it hard for mangrove seedlings to survive. Bacteria live in the mud surrounding the mangroves, breaking down dead plant and animal matter and producing sulfur dioxide gas.

Barramundi spawn near mangrove habitats and their larvae eat small plankton such as copepods found between mangrove roots. Other organisms that live in the mangroves include mud crabs, prawns, oysters, archerfish and estuarine crocodiles.

(a) For the organisms listed in the table below, use the correct term from the following list to classify the organism.

<table>
<thead>
<tr>
<th>Organism</th>
<th>Classification</th>
</tr>
</thead>
<tbody>
<tr>
<td>mangrove</td>
<td></td>
</tr>
<tr>
<td>copepod</td>
<td></td>
</tr>
<tr>
<td>mud crab</td>
<td></td>
</tr>
<tr>
<td>oyster</td>
<td></td>
</tr>
<tr>
<td>archerfish</td>
<td></td>
</tr>
<tr>
<td>estuarine crocodile</td>
<td></td>
</tr>
</tbody>
</table>

protozoa          | platyhelminth  | echinoderm  |
angiosperm        | nematode       | arthropod   |
porifera          | annelid        | chordate    |
cnidaria          | mollusc        |             |

(6 marks)
(b) Identify two (2) ways in which mangrove plants have adapted to deal with their high-salt environment.

<table>
<thead>
<tr>
<th>Adaptation 1</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Adaptation 2</td>
<td></td>
</tr>
</tbody>
</table>

(2 marks)

Question 2

Below is a list of body features/adaptations for a range of marine organisms.

1. firm attachments to rocks
2. minimal or no gas cavities in their body
3. schooling
4. ability to regrow body parts
5. swimbladder
6. sea snails with a trap door
7. flattened body shape

Each feature is typically associated with organisms in a particular ocean zone or environment. Place these features in the appropriate ocean zone/environment in the table below. Numbers may be used when placing them in their zone.

<table>
<thead>
<tr>
<th>Inter-tidal</th>
<th>Continental shelf benthic</th>
<th>Pelagic</th>
<th>Deep sea</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(7 marks)
Question 3
Complete the table below by classifying the Western Australian marine organisms into their phylum from the list of phyla provided and indicate whether the organism is further classified as planktonic, nektonic or benthic.

<table>
<thead>
<tr>
<th>Organism</th>
<th>Phylum</th>
<th>Planktonic/nektonic/benthic</th>

</tr>
</tbody>
</table>

(8 marks)
Question 4

Read the information in the box to answer the questions that follow.

Geographe Bay, off Bunbury in southwest W.A., has seagrass meadows which provide a habitat for the Australian herring. Young herring eat small crustaceans and adults eat small fish, including sardines, juvenile fish and small crustaceans living in the seagrass.

Herring school in large numbers as a defence mechanism against their predators, which include salmon and seal. As well, they hover over the seagrass meadows to give additional protection. Below is a table showing some of the organisms that inhabit a seagrass meadow in Geographe Bay and the organisms they eat.

<table>
<thead>
<tr>
<th>Organism</th>
<th>This organism eats:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Australian herring</td>
<td>anchovies, sardines, juvenile garfish, shrimp</td>
</tr>
<tr>
<td>anchovies</td>
<td>phytoplankton</td>
</tr>
<tr>
<td>sardines</td>
<td>mollusc larvae, phytoplankton</td>
</tr>
<tr>
<td>shrimp</td>
<td>phytoplankton</td>
</tr>
<tr>

<td>seagrass</td>
</tr>
<tr>
<td>juvenile garfish</td>
<td>seagrass, phytoplankton, shrimp</td>
</tr>
<tr>
<td>Australian salmon</td>
<td>Australian herring, shrimp</td>
</tr>
<tr>
<td>seal</td>
<td>Australian herring</td>
</tr>
<tr>
<td>Great White shark</td>
<td>seal</td>
</tr>
</tbody>
</table>

(a) Using the information from the table and the blank A4 sheet provided by your teacher, construct a food web showing the links between all organisms living on the seagrass meadow. (3 marks)

(b) In the space below, draw one complete food chain containing Australian herring. (1 mark)

(c) In the food web, what could be considered as a producer? (1 mark)

_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________

(d) What effect would the death of the seagrass have on the Australian herring? Explain your answer. (2 marks)

Question 3

Complete the table below by classifying the Western Australian marine organisms into their phylum from the list of phyla provided and indicate whether the organism is further classified as planktonic, nektonic or benthic.

<table>
<thead>
<tr>
<th>Organism</th>
<th>Phylum</th>
<th>Planktonic/nektonic/benthic</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flatback turtle</td>
<td>chordate</td>
<td>nektonic</td>
</tr>
<tr>
<td>Turban snail</td>
<td>mollusc</td>
<td>benthic</td>
</tr>
<tr>
<td>Sea star</td>
<td>echinoderm</td>
<td>benthic</td>
</tr>
<tr>
<td>Jelly fish</td>
<td>cnidaria</td>
<td>planktonic</td>
</tr>
</tbody>
</table>

(8 marks)

Question 4

Read the information in the box to answer the questions that follow.

Geographe Bay, off Bunbury in southwest W.A., has seagrass meadows which provide a habitat for the Australian herring. Young herring eat small crustaceans and adults eat small fish, including sardines, juvenile fish and small crustaceans living in the seagrass. Herring school in large numbers as a defence mechanism against their predators which include salmon and seal. As well, they hover over the seagrass meadows to give additional protection. Below is a table showing some of the organisms that inhabit a seagrass meadow in Geographe Bay and the organisms they eat.

<table>
<thead>
<tr>
<th>Organism</th>
<th>This organism eats:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Australian herring</td>
<td>anchovies, sardines, juvenile garfish, shrimp</td>
</tr>
<tr>
<td>anchovies</td>
<td>phytoplankton</td>
</tr>
<tr>
<td>sardines</td>
<td>mollusc larvae, phytoplankton</td>
</tr>
<tr>
<td>shrimp</td>
<td>phytoplankton</td>
</tr>
<tr>
<td>mollusc larvae</td>
<td>seagrass</td>
</tr>
<tr>
<td>juvenile garfish</td>
<td>seagrass, phytoplankton, shrimp</td>
</tr>
<tr>
<td>Australian salmon</td>
<td>Australian herring, shrimp</td>
</tr>
<tr>
<td>seal</td>
<td>Australian herring</td>
</tr>
<tr>
<td>Great White shark</td>
<td>seal</td>
</tr>
</tbody>
</table>

(a) Using the information from the table and the blank A4 sheet provided by your teacher, construct a food web showing the links between all organisms living on the seagrass meadow.

Sample assessment task

Marine and Maritime Studies – General Year 11

Task 15 — Unit 2 Sailing context

Assessment type: Practical

Conditions
Period allowed for completion of the task: two weeks; combination of in-class and out-of-class time.

Task weighting
5% of the school mark for this pair of units

Knot board (30 marks)
An important skill for a sailor is the ability to tie a variety of knots. Some knots are developed for very specific purposes.

In this task, you will research seven knots, neatly display them on a board with labels and provide background information about each knot.

What you need to do

Research notes
For each of the knots listed below, you will need to:
1. identify the origin of each knot and outline its use, and (14 marks)
2. acknowledge the source of information by providing a bibliography. (2 marks)

Knots to be researched:
- clove hitch
- round turn and two half-hitches
- bowline
- figure of eight
- sheet bend
- reef knot
- stopper

Design and construction of the knot board
1. Prepare a suitable board to display your knots to maximise visual impact (consider the need for contrasting rope and board colours). (3 marks)
2. Tie each knot, ensuring they are appropriately set with their ends correctly whipped and/or spliced to prevent fraying. (7 marks)
3. Invisibly mount each knot on your board. (2 marks)
4. Label each knot. (2 marks)

What needs to be submitted?
Research notes and knot board with labels
